Are You Making *Specific* Post-War Plans?

The public expects local governments to be ready to go ahead with needed improvements promptly when the war ends.

YOU have made some plans, of course. If not, you are in an unfortunate minority. Of 1101 replies to a questionnaire we sent out a few months ago, 791 cities have replied that they have prepared or are preparing plans.

Complete plans, however, are important. If your city council or County Board gave the "go ahead" tomorrow could you pull out of the files data sufficiently detailed to enable you to get started at once? Could you order the necessary pipe, specials, valves, etc.; the desired lengths of each size of sewer, with branches, manhole heads and other appurtenances? You plan to enlarge your water or sewage treatment plant; could you set stakes tomorrow for the foundations, and have you planned to the last detail the pumps and their connections and other equipment needed? Do you know how many yards of broken stone and gallons of asphalt you want for those planned street or highway improvements?

Do you know where to get these materials? Have you a list of all who manufacture just the kind of pump or sewage plant equipment you want, with valves, gauges, automatic control devices and other details?

Then how about equipment for your street and highway work? Many of those now in use are practically worn

out and should be replaced just as soon as new ones are obtainable. Perhaps some of them are obsolete or not the best type for your work. Study your needs carefully so that when you get new equipment you will select that most suitable for the work you have in view.

Use These Big Helps in Planning

All that involves a lot of work. But you can greatly simplify it and feel more confidence in the result if you make use of the Manuals that PUBLIC WORKS has published for that purpose—The Manual of Water Works Equipment and Materials, The Manual of Sewage Disposal Equipment and Sewer Construction, and The Highway, Street and Airport Manual.

From these you can learn, with a minimum of time and trouble, what kinds of equipment are available for each purpose; the information is more complete and up to date than you can obtain in any other way; and it includes the names of all the leading manufacturers.

If you have these Manuals, be sure to use them.

If you do not have the 1943 editions, write today for information on how to obtain them. PUBLIC WORKS Magazine, 310 E. 45th St., New York 17, N. Y.
